

Employee Data Breakdown

To start we have found 18 employees with missing data in the spreadsheet, they have been grouped together in a separate spreadsheet and will not be considered in the data analysis as their data might be flawed.

To start with we broke down the difference in pay between men and women in the company:

Gender	Count	Average Annual Salary
Female	509	112767.726916
Male	472	113989.368644

The amount of employees of both genders are satisfactory and while there is a significant difference in average annual salary between male and female employees, which shows room for improvement, the difference is well above the average company in the USA and EU.

Next we broke down the number of employees by ethnicity:

Ethnicity	Employee Count
Asian	400
Black	73
Caucasian	260
Latino	248

Country	Employee Count
Brazil	137
China	216
United States	628

Ethnicity	Country	Employee Count
Asian	China	216
Asian	United States	184
Black	United States	73
Caucasian	United States	260
Latino	Brazil	137
Latino	United States	111

Through these three tables we gather that there is a significant lack of black employees in the company since there are over 600 employees in the United States where all the company's black employees are, and yet black employees constitute 11.6% of the employees.
